## Test Report – ITT testing according to EN 1195:1997 *Timber structures.*

### *The testing of structural floor decking*

Material: **Floor construction – 10 mm particleboard top floor on 22 mm particleboard sub floor with floor heating system.** See Appendix 1

Sampling: The test material was sampled and sent by the client and received at the Danish Technological Institute 16-07-2009

Method: EN 322:1993 “Wood Based Panels. Determination of moisture content”  
EN 323:1993 “Wood Based Panels. Determination of density”  
EN 324-1:1993 “Wood Based Panels. Determination of dimensions of boards – Part 1: Determination of thickness, width and length”  
EN 1195:1997 “Timber structures. The testing of structural floor decking”  
EN 12871:2000 “Wood based panels. Performance specifications and requirements for load bearing boards for use in floors, walls and roofs”

Installed according to guidance given by Vibopan in e-mail, dated 13-07-2009  
Tested with a centre to centre span of 600 mm. Tested at unsupported end joints. Glued in T&G and fixed with screws 4.6 × 64 mm countersunk and maximum spacing at Perimeter/-Intermediate: 150 mm/300 mm. Top floor screwed to sub floor.  
ENV 12872:2000 “Wood based panels. Guidance on the use of load bearing board in floors, walls and roofs”

The test material was not conditioned prior to testing.

Test Equipment Load cell: 50 kN HBM, Type U2, EQP-652  
Length transducer: ± 50 mm HBM, W50K Nr 39712

Period: July 2009

Result: Tested as structural floor decking with heating system (load category A Residential) on joists with a 600 mm centre to centre span and unsupported end joints the test results are given in :  
Appendix 2: Impact load,  
Appendix 3: Static Load,  
Appendix 4: Load/deflection curves,  
Appendix 5: Moisture Content, sub floor  
Appendix 6: Density, sub floor  
Appendix 7: Thickness, sub floor  
Evaluation of test results:  
Soft body impact load  
The floor structure meets the requirements for floors given in EN 12871.  
Static point load  
 $R_m = 539 \text{ N/mm}$   
 $F_{ser,k} = 4056 \text{ N}$   
 $F_{ult,k} = 4929 \text{ N}$   
The floor structure meets the requirements for wood based panel floorings (point load + soft body impact test) given in the Danish NA to EN 13986.

Terms: The test has been performed according to attached conditions, which are according to the guidelines laid down by DANAK (The Danish Accreditation). The testing is only valid for the tested specimen. The test report may only be extracted, if this is either public accessible, or if the laboratory has approved the extract.

Date/place 29-07-2009, Danish Technological Institute, Wood and Textile, Taastrup

**Materials**

Laboratory No 321662

**Sub floor**

Material	:	Particleboard
Thickness	:	Nominal 22 mm
Production date	:	17-04-2009 kl. 5:19 (T&G) (Panels from more production dates are tested)
Panel width and length	:	600 mm by 1800 mm
Edges	:	T&G in all edges - See cross section below
Grooves for heat system	:	See cross section below
Marking	:	CE 1073-CPD-803 Novopan 09 EN 13986 EN 312-6 Flooring E1 D <sub>fl</sub> -S1 22 mm > 600 kg/m <sup>3</sup> 130409 Denne side op 17=04=09 05:19
Number of panels	:	51
Tested number of elements	:	24

**Heat distribution plates**

Heat distribution plate	:	Wavin, Trigris heat distribution plate Alu Ø 16 x 180 mm, date 04-08-2008
-------------------------	---	--

**Heating hose**

Heating hose	:	Wavin 21 PE-RT Gulvvarme-Floor heating DIN 16833/4721 ISO/DIS 22391 D433420 Iltspærre- oxygen barrier DIN 4726 2009/06/22 22:50 16 x 2,0 60 °C PN 6 18561 M
--------------	---	--

**Floor cardboard**

Material	:	Paper
Dimension	:	500 grams/m <sup>2</sup>
Production date	.	No information
Marking	:	None

**Top Flooring**

Material	:	Novopan Particleboard P1
Thickness	:	Nominal 10 mm
Production date	.	No information
Board width and length	:	1220 mm by 2505 mm
Edges	:	Straight
Marking	:	None

**Floor construction:**

- 45x 165 mm joists, cc 600 mm, on steel frame
- Sub floor. 22 mm particleboard – glued together in T&G with PVAC and fixed to joist with screws 4,6 x 64 mm. Installed with unsupported end joints. Minimum panel length 300 mm.
- Heat distribution plates fitted into grooves in sub floor and nailed to the particleboard with 2 roofing felt nails per plate.
- Heating hose pressed into heat distribution plates
- Cardboard – no overlay.
- Top flooring. 10 mm particleboard – glued together with PVAC and fixed to sub floor with screws 4,6 x 51 mm per 190 x 190 mm, minimum 20 mm from panel edges
